

WHAT IS CLAIMED IS:

1. A camera comprising:

an image pickup optical system for forming
an optical image of an object;

5 a photoelectric converting device for converting
the optical image to an electric signal;

an optical device disposed between the image
pickup optical system and the photoelectric converting
device; and

10 vibration applying means for vibrating the optical
device.

2. A camera according to claim 1, further
comprising a holding member which seals between the
optical device and the photoelectric converting device.

15 3. A camera according to claim 1, wherein the
vibration applying means applies one of primary bending
standing-wave vibrations and oval vibrations to the
optical device.
